

Omuramba Impact Investing CC promotes water-friendly sanitation in beautiful Namibia, one of the world's most arid countries. The Enviro Loo has a solid track record for use in schools, at remote tourism facilities, and high-density urban areas.

A well established, internationally awarded, patented, tried and tested water friendly sanitation solution, the Enviro Loo is designed to provide a hygienic and dignified sanitation solution in locations with limited or no access to water and a sewerage system.

It only uses three of the natural elements: sun, air and gravity. Resulting low maintenance is another benefit, especially in more remote locations.

In Namibia, the Enviro Loo:

- is ideal for use in eco-tourism lodges in remote locations;
- offers a true value add to sanitation in schools, clinics, and other public infrastructure located away from existing water and sewerage infrastructure; and
- presents an attractive sanitation alternative at construction and mining sites in remote and/or ecologically sensitive locations.

Omuramba provides installation support and all Enviro Loo units come standard with a 12-months maintenance contract (renewable).

It's not all about flushing!
